

*AMENDMENTS TO THE CLAIMS*

This listing of claims replaces all prior versions, and listings, of claims in the application.

Claims 1-16 are cancelled.

17. (Currently Amended) A panel device having at least one housing, which comprises two panels being movable between a first position and a second position thereof, the panels being rollable or foldable ~~and of a different kind~~, said at least one housing comprises a sub-housing for each separate panel and at least one of the sub-housings being provided with connection means enabling coupling and uncoupling a housed one of the two panels ~~realized~~ such that said housed one of the two ~~at least one of the~~ panels is removable and replaceable by a replacement panel.

18. (Cancelled)

19. (Previously presented) A panel device according to claim 17 wherein at least one of the sub-housings is slidable along a first axis.

20. (Currently amended) A panel device according to claim ~~17~~19 wherein at least one of the sub-housings is rotatable with respect to the first axis.

21. (Previously Presented) A panel device according to claim 20 in which the sub-housings have a sliding device in common.

22. (Original) A panel device according to claim 21 in which the sliding device comprises driving electronics.

23. (Previously Presented) A panel device according to claim 17, in which the panels are rollable with respect to a common axis.

24. (Previously Presented) A panel device according to claim 17, in which at least two of the sub-housings are rotatable with respect to each other along a first axis.

25. (Currently amended) A panel device according to claim ~~17~~24, in which at least one of the sub-housings ~~sub-housing~~ is rotatable with respect to a ~~further~~second axis substantially perpendicular to the first axis.

26. (Previously Presented) A panel device according to claim 17, in which the sub-housings have a driving device in common.

27. (Previously Presented) A panel device according to claim 26, in which the driving device is rotatable.

28. (Currently amended) A panel device according to claim 44~~43~~, in which each separate panel is rollable from a separate axis.

Claims 29 – 39 (Cancelled)

40. (Currently amended) A panel device according to claim 17, in which said two panels ~~have a different kind of application~~incorporate first and second structural and/or functional characteristics.

41. (Currently amended) A panel device according to claim 40, in which a first one of said two panels has a touch function and ~~another~~a second one of said at least two panels has a display function.

42. (Currently amended) A panel device according to claim 17, in which said two panels ~~have been realized in different technologies~~a first panel technology and a second panel technology that differs from the first technology.

43. (Previously Presented) A panel device according to claim 17, in which the housing comprises at least three panels.

44. (Previously Presented) An electronic assembly comprising an electronic apparatus and the panel device according to claim 17 the electronic apparatus comprising means for providing panel parameters to an interface between the electronic apparatus and the panel device.

45. (New) A panel device according to claim 19, in which at least one of the sub-housings is rotatable with respect to a second axis substantially perpendicular to the first axis.
